

Upgrade your business with Sysnova ERP (Enterprise Resource Planning)

What is ERP?

Enterprise Resource Planning (ERP) software integrates all the data of an organization into a single database, so that all information is available immediately. This helps an organization to be efficient and transparent.

Why Sysnova ERP?

Previously, ERP software was only available at great expense from multi-national proprietary vendors. However, in the last 20 years the software industry has undergone an open-source revolution; almost all expensive proprietary software now has free/open-source replacements available.

Similarly, expensive proprietary ERP solutions can be replaced by free/open-source ERP applications such as Sysnova ERP. Sysnova has specialized in implementing free/open-source ERP applications in Bangladesh since 2009, and has great expertise in this area.
